

# Conference Center

---

In today's business environment, maintaining a competitive advantage means enabling employees, customers, and business partners to communicate and share information, in real-time, regardless of location. With on-demand, interactive multimedia communications, you can enhance operational efficiency, increase sales force effectiveness, and improve customer and partner relationships.

With Meeting Center, employees can instantly collaborate and share ideas, whether in their office, at home, or on the road. Salespeople can conduct presentations and demonstrations without leaving the office. And customers and business partners can stay current on new product updates and sales initiatives.

Meeting Center makes your online meetings as effective as in-person meetings by allowing you to share any application, document or presentation in a meeting—in real time. Include Microsoft® PowerPoint™ presentations with animations and slide transitions. And share rich media within your presentations to create a highly interactive meeting experience.

## Meeting Center

Share multiple PowerPoint presentations in a single meeting, with support for animation and slide transitions. Include multimedia objects, such as WebEx recordings, Macromedia® Flash™, streaming video and audio, and 3D, in presentations, with full control over delivery. Incorporate streaming or local multimedia content into your meeting.

- **Application Sharing**  
Share any business-critical and desktop application, without uploading files to a server. Control any application remotely, enhancing the effectiveness of live demos and team meetings.
- **Document Sharing**  
View multiple documents or graphics with high resolution, multi-level zooming, and annotation capabilities.
- **Seamless Video Integration**  
Incorporate real-time videoconferencing into your meeting using any desktop video camera.
- **Record, Edit and Playback Meetings**  
Record an entire meeting or any desktop applications for later reference training purposes, or demos. Even edit the recorded session in preparation for playback.
